

The Fun Lab

Consulting in operational safety for water parks and swimming pools

Preparation of operation manuals and technical documentation to meet the requirements of applicable European safety standards.

The Fun Lab

About us

The Fun Lab is an internationally accredited entity for the inspection and certification of aquatic leisure facilities and recreational pools in accordance with current European (EN) and American (ASTM) standards. For this purpose, we have been accredited under the ISO 17020 management system as an independent inspection body.

We participate in the working committees on regulation for water parks and swimming pools of UNE (Spanish Association for Standardization) and CEN (European Committee for Standardization). In addition, we are members of IAAPA.

In addition, we are the global Health & Safety partner of leading tour operators TUI and Jet2Holidays, acting as technical advisors and safety auditors for aquatic leisure facilities and recreational pools.

The Fun Lab

The reason for this service: Compliance with regulations and up-to-date operation manuals

The international standards EN 1069 and ASTM F2376, related to safety in the design, manufacture, installation, and operation of facilities with water slides, establish that the operator of the establishment must have a set of associated technical documentation and keep it properly updated.

Similarly, it is also necessary to have operation manuals and lifeguard protocols so that all staff members share common guidelines and know how to act in the event of any incident. This is especially important for establishments that outsource their lifeguard teams.

The Fun Lab

The reason for this service: legal protection against possible incidents

There is a significant gap in these areas, leaving many management companies without adequate documentation protection in the event of accidents or incidents that may occur, especially in establishments that outsource their lifeguard teams.

For all these reasons, we are launching this new consulting service for the preparation and proper management of documentation and operational safety for water parks and recreational pools.

And all of this under two work modalities that adapt to the specific needs of each establishment.

1. Online consulting

2. On-site auditing and consulting

The Fun Lab

Option 1

Online consulting for the analysis and development of documentation

The Fun Lab

Modality 1 – Online consulting

We propose an online consulting service through which we prepare the following documentation:

At the level of technical document management of the facility:

1. Risk analysis document for each aquatic attraction (parameters according to the applicable standard)
2. Maintenance instructions
3. Documentation for recording maintenance work, repairs, and modifications of the equipment
4. Support in the creation of safety signage* for the general usability of the facilities (parameters according to the applicable standard).

**Delivered with a neutral design. Adaptation to the establishment's corporate format is carried out by the company.*

At the level of operation and lifeguard protocols:

1. Lifeguard onboarding and orientation guide
2. General procedures manual for lifeguard management in aquatic facilities
3. Record documentation (water rescues, general incidents, operation of each attraction, first aid kit supply control, Continuous Evaluation Record of lifeguards)
4. Generic operational safety documentation (water rescue and first aid reports, general incident logs)

The Fun Lab

Option 2 (extended services)

On-site auditing and consulting for the development of the work

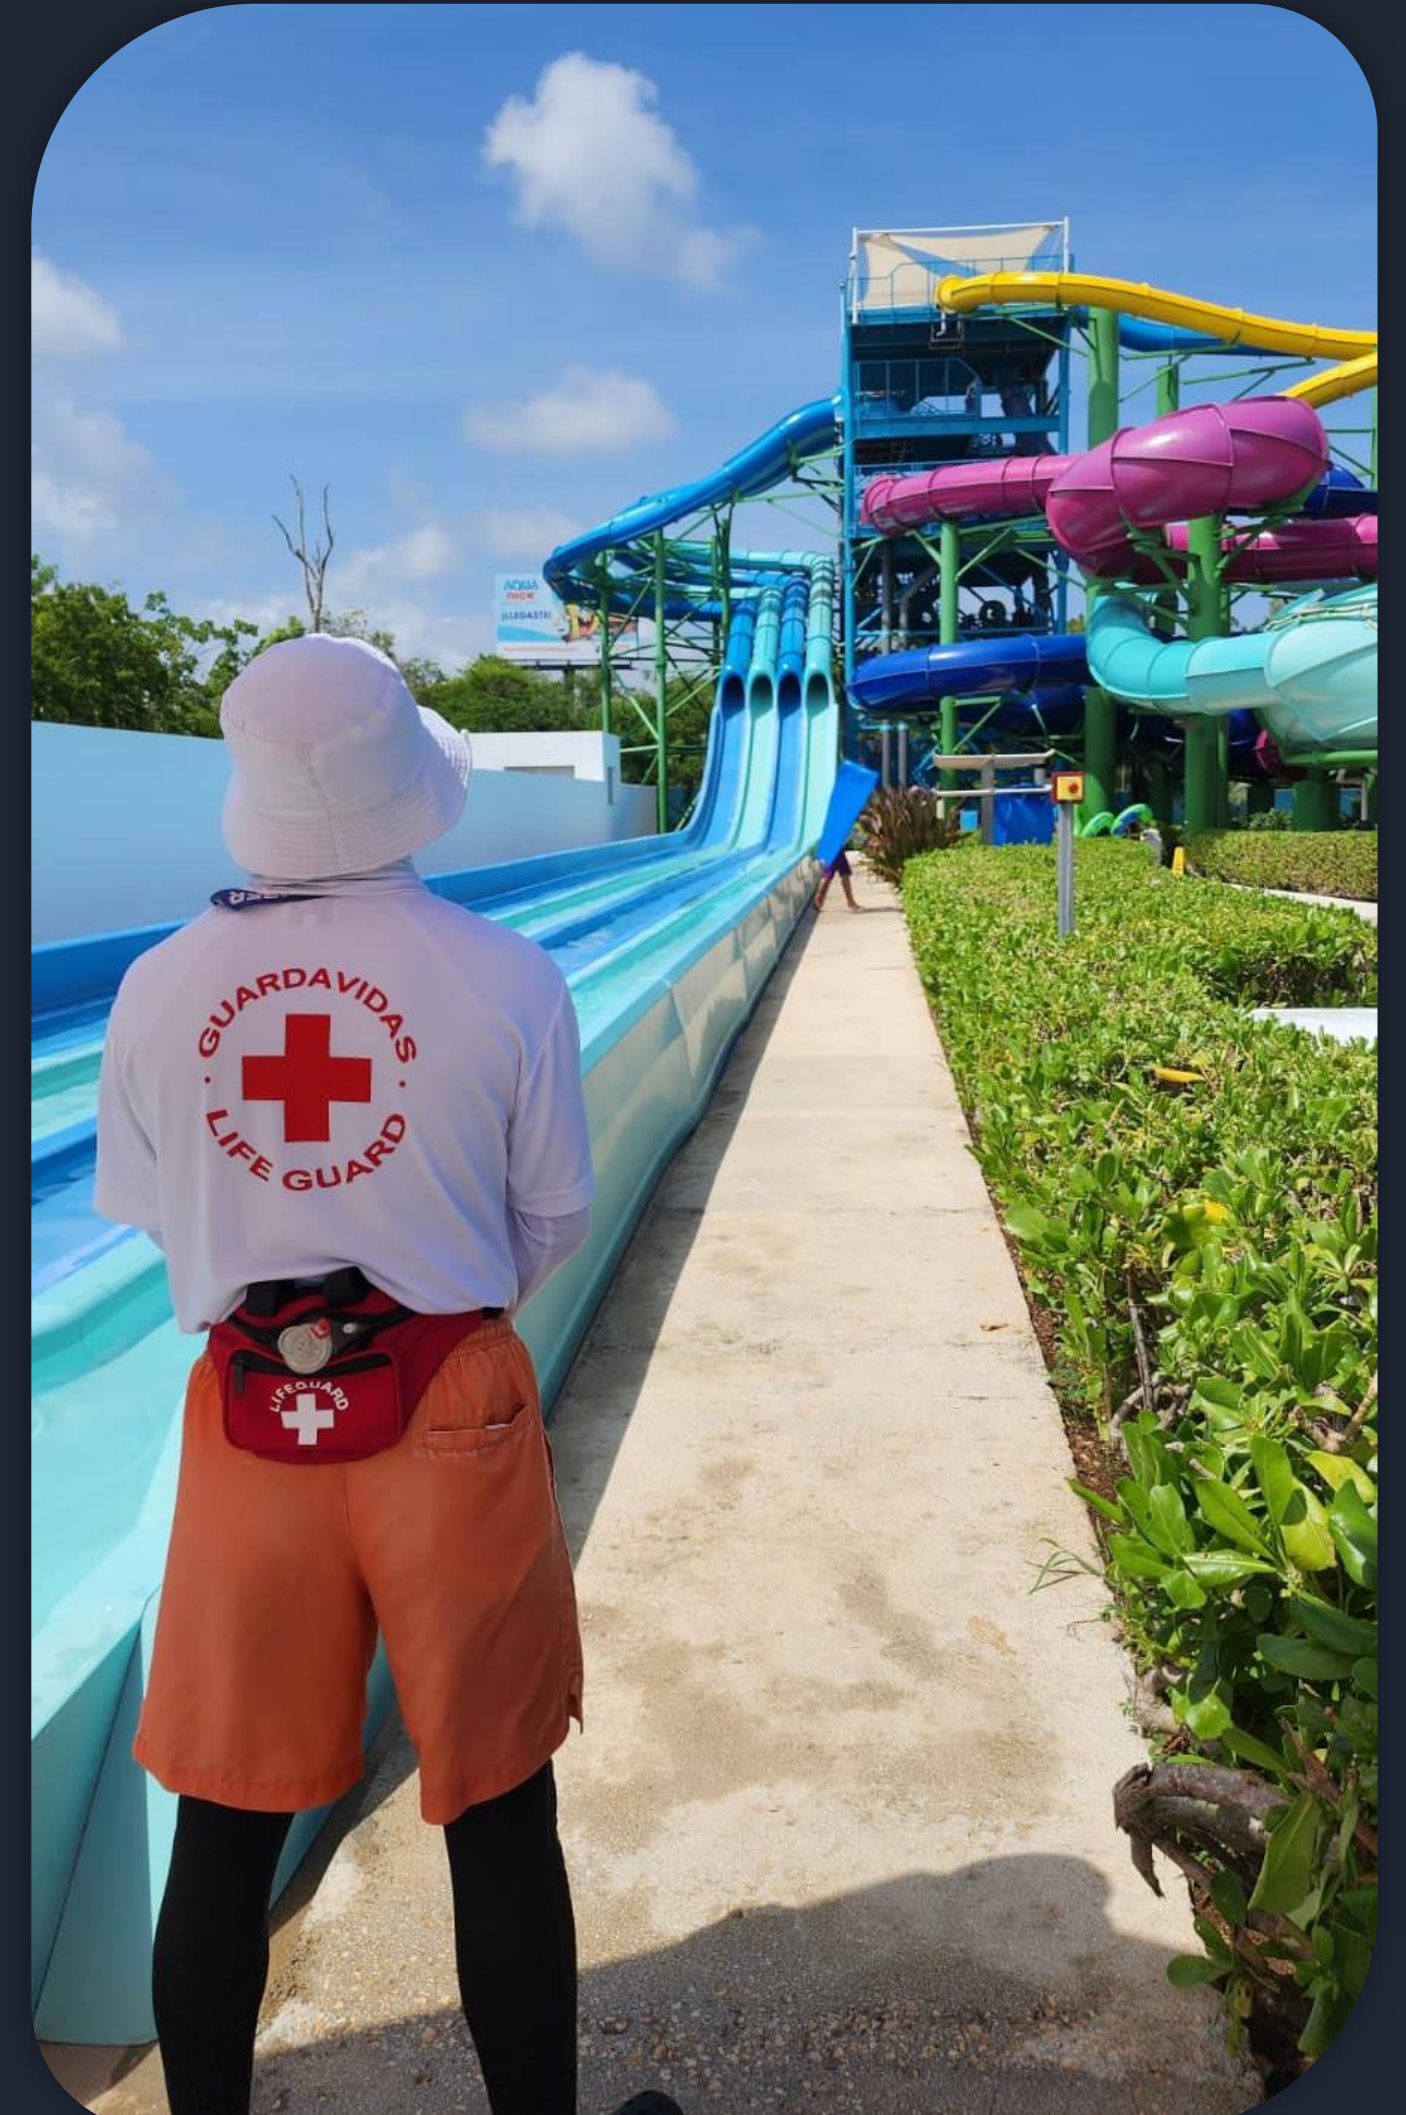

The Fun Lab

Option 2 – On-site auditing and consulting for the development of the work

Beyond the preparation of all the documents included in the previous case, we offer the option to expand the service and carry out a project with on-site implementation at the establishment, consisting of three phases:

1. Conducting a safety audit to identify risks and perform on-site evaluations of lifeguards.
2. Thorough review of existing protocols and documentation related to aquatic operational safety.
3. Development and implementation of new, comprehensive operations manuals, refined through meetings with the company's professionals.

Comparative chart

	ONLINE CONSULTING	ON-SITE AUDITING AND CONSULTING
Risk analysis document for aquatic equipment	✓	✓
Maintenance instructions + Work record documentation	✓	✓
Support in the creation of safety signage	✓	✓
Lifeguard onboarding and orientation guide	✓	✓
General procedures for lifeguard management	✓	✓
Lifeguard and operations logbooks	✓	✓
Generic operational safety documentation	✓	✓
Conducting an on-site safety audit to identify risks and evaluate lifeguards	✗	✓
Thorough review of existing protocols and documentation related to aquatic operational safety	✗	✓
Development and implementation of new comprehensive operation manuals	✗	✓
